Key words

Space - the area that contains the entire universe beyond the earth; outer space.

Solar System - eight planets that orbit the sun.

Orbit - to move in a circle around. The earth makes one orbit around the sun each year.

Astronaut - a person trained to take part in space flight.

Space Station - a large spacecraft in orbit for a long period of time.

Telescope - an instrument that uses lenses to make distant objects appear larger.

Rocket - a flying device, shaped like a tube that is driven by hot gases released from engines.

Space Shuttle - a spacecraft designed to carry astronauts and their equipment back and forth between the earth and space.

Key people in History

Tim Peake

Neil Armstrong
